jibinjohnson.in — SEO Strategy & Homepage Content

Oct 30, 2026 · @Vaishna

1. Competitor analysis

Seven Kerala and Trivandrum freelancer sites target the same searches, and none of them backs its claims with real project results. That gap is your opening.

Limitation: I couldn't access live Google results, so ranking positions are **not verified**. The competitors below came from a web search for the target phrases, and I opened each page to audit it. Run the same searches in an incognito Google window from Trivandrum to confirm positions before relying on this list.

Competitor	Page audited	Targets	Title tag	H1	Proof of work	Contact methods
Salman MP	Freelance web developer, Trivandrum	Web developer, Trivandrum	Best Freelance Web Developer in Trivandrum | Next.js & Full-Stack	"WebDeveloperinTrivandrum" (words run together)	Testimonials only; projects on a separate Work page	Booking link, contact page; no phone or WhatsApp visible
Abin Antony	Freelance web developer, Trivandrum	Web developer, city pages across Kerala	Freelance Web Developer in Trivandrum, Kerala — Abin Antony	Freelance Web Developer in Trivandrum, Kerala	3 named testimonials; no projects on the page	WhatsApp, phone, email, quote form
Nikhil Soman	SEO expert, Trivandrum	SEO + web design, many city pages	SEO Expert & SEO Services in Trivandrum | Nikhil Soman	SEO Expert in Trivandrum – Rank on Google and Get Cited by AI Search	2 local case studies (no ranking numbers); 6 testimonials; public pricing	WhatsApp, form, phone, email
Anzar Riyaz	Homepage	Freelance web designer, Trivandrum	Freelance web designer in Trivandrum Kerala - Anzar Riyaz	Hi, I'm a freelance Web designer based in Trivandrum Kerala	9 linked client sites; 3 placeholder links	WhatsApp, phone, form
Rahul Angi	Best SEO expert, Trivandrum	SEO, Trivandrum and Kerala	Best Seo Expert in Trivandrum	Best Seo Expert in Trivandrum	1 unnamed testimonial; no projects	WhatsApp button only
Jijo Joseph	SEO expert, Trivandrum	SEO, Trivandrum and Kerala	No.1 SEO Expert in Trivandrum | Jijo Joseph	Searching for the Top SEO Expert in Trivandrum?	Claims 300+ projects; none shown	Enquiry form, WhatsApp

Competitor	Page audited	Targets	Title tag	H1	Proof of work	Contact methods
Hiran Web Developer	Homepage	Web design + SEO, Trivandrum and Kollam	HIRAN WEB DEVELOPER	None (hero is an H2)	Portfolio on another domain; no case studies	Phone, email, WhatsApp

All pages were opened on 30 October 2026.

2. Competitor strengths and weaknesses

The strongest competitor, Nikhil Soman, wins on structure: service pages, local detail, pricing, and a 12-question FAQ. Every competitor is weak on verifiable proof.

Competitor	What they do well	Where they're weak
Nikhil Soman	Separate service and city pages; local landmarks (Technopark, Pattom); public pricing from ₹10,000/month; 12-question FAQ; AI search angle	Conflicting figures (500+ vs 300+ projects); counters show "0+"; no ranking or traffic numbers in case studies
Abin Antony	Clear title and H1; many contact options; written terms (source ownership, 30-day fixes)	Says Trivandrum but based in Kochi; duplicate Trivandrum and Thiruvananthapuram pages; no projects on the page
Salman MP	Clear process section; tech stack shown; FAQ	Broken H1; "Ranked #1" and "100% happy clients" unproven; Malappuram base conflicts with Trivandrum targeting; FAQ answers missing
Anzar Riyaz	Links to 9 real client sites; WhatsApp and phone up front	Typos; © 2017; placeholder "#" links; no case studies or FAQ
Rahul Angi	Covers AEO and GEO (AI search)	"Best" repeated with no evidence; no clients, projects, or FAQ
Jijo Joseph	Long experience claim; certifications named	"No.1" with no source; counters show 0; duplicated headings; no proof of work
Hiran Web Developer	Phone and email visible	PHP errors visible on the page; no H1 or meta description; "#" links; portfolio off-site

Verified pattern across all seven: heavy repetition of "best" and "Trivandrum", claims without evidence, and no project with measured results. Six of seven show no real case study on the page audited.

3. Search intent analysis

Most target keywords are commercial: someone wants to hire a person or buy a service in Kerala. The "AI developer" keywords are mostly job-market searches, not client searches, so they suit your profile pages rather than service pages.

The intent below is judged from the keyword wording and from the types of pages that came up in search. Keyword volumes weren't available, so none are given.

Keyword group	Intent	What the searcher wants	Best page type
Web Developer in Kerala / Trivandrum	Commercial, professional profile	A person to build a site; also recruiters checking candidates	Homepage
Freelance Web Developer / Freelance Website Developer in Kerala / Trivandrum	Commercial, freelancer	An individual (not an agency), usually cheaper and more direct	Homepage + Web Development page
Website Development Services in Kerala / Trivandrum	Commercial, service	A clear service offer: what's included, process, timeline	Web Development page
SEO Specialist in Kerala / Trivandrum	Commercial, professional profile	A person who does SEO; also SEO job searches	SEO page (secondary on Home)
SEO Services in Kerala / Trivandrum	Commercial, service	What's included, how results are measured	SEO page
Freelance SEO Specialist in Kerala / Trivandrum	Commercial, freelancer	An individual SEO consultant	SEO page
Full Stack Developer in Kerala / Trivandrum	Mixed: jobs + hiring	Recruiters and companies looking for developers	Full-Stack & Django page

Keyword group	Intent	What the searcher wants	Best page type
Python Django Developer in Kerala / Trivandrum	Commercial + jobs	Someone to build a custom web app	Full-Stack & Django page
AI Developer / AI Full Stack Developer in Kerala / Trivandrum	Mostly jobs and recruiting	Candidates with AI skills	About page + project case studies

Two keyword groups to treat carefully:

- **SEO Specialist vs SEO Services:** the same page can serve both, so don't build two near-identical pages.
- **AI Developer:** you're early in AI work. Rank for it with an honest About page and real AI projects, not a service page promising AI builds.

4. Keyword mapping

Each page gets one main keyword. Kerala and Trivandrum go on the same page, because a separate page for each city would compete with itself.

Page	URL	Main keyword	Secondary keywords
Home	/	Web Developer in Kerala	Web Developer in Trivandrum; SEO Specialist in Kerala; Freelance Web Developer in Kerala
Web Development	/services/web-development/	Website Development Services in Kerala	Website Development Services in Trivandrum; Freelance Website Developer in Kerala / Trivandrum
SEO Services	/services/seo/	SEO Services in Kerala	SEO Services in Trivandrum; SEO Specialist in Trivandrum; Freelance SEO Specialist in Kerala / Trivandrum

Page	URL	Main keyword	Secondary keywords
Full-Stack & Django	/services/python-django-development/	Python Django Developer in Kerala	Python Django Developer in Trivandrum; Full Stack Developer in Kerala / Trivandrum
About	/about/	Jibin Johnson (name)	AI Full Stack Developer in Kerala / Trivandrum; AI Developer in Trivandrum
Work	/work/	Web development and SEO projects	Project names, Django project, landing page design
Contact	/contact/	Contact Jibin Johnson	Hire a web developer in Trivandrum

Rules to avoid cannibalization

- Only the Home page uses "Web Developer in Kerala" in its title and H1.
- Only the SEO page uses "SEO Services" in its title and H1. The Home page links to it with that anchor text.
- "Full-Stack Development" and "Python Django Development" share one page. Two pages would split the same small audience.
- "AI-Assisted Development" doesn't get its own service page yet (see section 9).
- Don't create city pages for Kochi, Kollam, and so on. You have no work or presence there to support them.

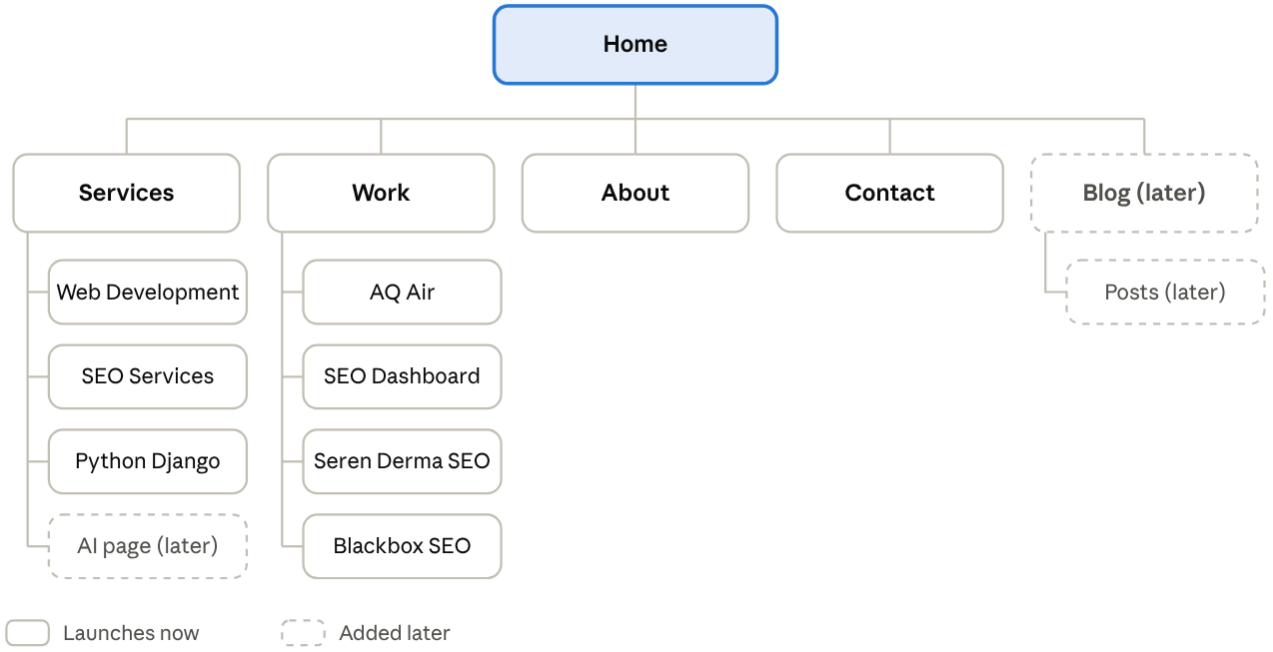

Long-tail keywords worth adding (based on your real work, not volume data)

- SEO for clinics in Kerala / healthcare SEO Kerala, supported by the Seren Derma project
- SEO for education institutes / training academies, supported by the Blackbox Learning project
- Django web application developer Kerala

5. Website architecture

Launch with Home, three service pages, Work with four case studies, About, and Contact. Add the blog and an AI-Assisted Development page once you have content and projects to support them.

Launch five sections now; add the blog and AI page later

site architecture · launch now vs later

Each service page links to the case studies that prove it. Kerala and Trivandrum share one page per service, with no separate city pages, because that avoids thin duplicate pages.

6. Content gap opportunities

Your position: **a web developer who builds with SEO from the first line of code, and uses Python, Django, and AI tools to automate the work around it.** None of the seven competitors combines all three.

Gap seen in competitors	What you do instead
"Best" and "No.1" with no proof	No superlatives. Every claim is tied to a project you name.
Projects listed with no explanation	One case study page per project: problem, your role, what you built, results, and links
Web developers who barely mention SEO; SEO people who don't code	Show both on one page: code that is fast, crawlable, and structured for search
No technical depth	Explain decisions, e.g. why AQ Air uses vanilla JavaScript and IntersectionObserver instead of a framework

Gap seen in competitors	What you do instead
Counters showing "0" and conflicting numbers	Use only numbers you can back up, or none at all
Typos, broken H1s, placeholder links	A clean site with a 90+ Lighthouse score is itself proof of skill for an SEO specialist
Location claims that don't match where they work	You actually work in Thiruvananthapuram, so say so consistently, with no fake branch offices
No custom software	Your Django dashboard shows you can build tools, not just websites
FAQ missing or empty	A real FAQ with complete answers, marked up with FAQPage schema

Trust signals to add over time

- LinkedIn recommendations from your manager or clients, quoted on the site with permission
- Ranking screenshots from Google Search Console, with client names hidden if needed
- A GitHub link on every code project
- Your PG in AI and BCA, listed accurately on the About page

7. Homepage SEO strategy

The homepage targets "Web Developer in Kerala" through its title, H1, and first paragraph, then hands visitors off to the service pages for SEO and Django searches.

- **Title tag:** Web Developer in Kerala & SEO Specialist | Jibin Johnson (55 characters)
- **H1:** Web Developer and SEO Specialist in Kerala
- **First 100 words:** mention "web developer", "SEO", "Thiruvananthapuram (Trivandrum)", and "Kerala" once each, in natural sentences.
- **H2s:** describe each section in plain words. Use one location keyword in at most two H2s.
- **Keyword use:** "Kerala" or "Trivandrum" appears about 4–6 times across the whole page, never in a list of keywords.
- **Internal links:** each service card links to its service page using the target keyword as anchor text (for example, "SEO services in Kerala").
- **Proof:** four project cards near the top half of the page, each linking to a case study.

- **Conversion:** a primary CTA in the hero, one mid-page after the projects, and a final CTA with the form.
- **Structured data:** Person and WebSite schema on Home, plus FAQPage for the FAQ (see section 12).
- **Speed:** keep the hero image under 150 KB, in WebP format, with set width and height, so the page stays fast.

8. Homepage content (ready to publish)

The heading level of each line is shown in brackets. Text in [square brackets] is a placeholder.

Hero

[H1] **Web Developer and SEO Specialist in Kerala**

I'm Jibin Johnson. I build fast, responsive websites that are ready for search from day one, and I use Python, Django, and AI tools to automate the work behind them. I'm based in Thiruvananthapuram (Trivandrum) and work with businesses across Kerala and beyond.

- Primary button: **Start a Project** → /contact/
- Secondary button: **See My Work** → /work/
- Small line under the buttons: Available for freelance projects and full-time roles

About preview

[H2] **Where web development meets search**

Most websites get built first and optimized later. I do both together. At Prception Medialab in Thiruvananthapuram, I build responsive websites and run SEO for clients in healthcare, education, hospitality, and real estate, and I lead the SEO and web team for Blackbox Learning, an AI training academy.

Running SEO campaigns showed me how much time goes into manual coordination, so I started building software to handle it. That path led me to a PG in Artificial Intelligence and to full-stack work in Python and Django.

Link: **More about me** → /about/

Services overview

[H2] **What I can help you with**

[H3] **Website Development** Responsive, fast websites with clean HTML, CSS, and JavaScript, built with search and usability in mind. → *Website development services in Kerala*

[H3] **SEO Services** Technical, on-page, and off-page SEO: keyword research, site fixes, content, and link building, tracked in Google Search Console and Google Analytics. → *SEO services in Kerala*

[H3] **Python & Django Development** Custom web applications and internal tools, from database design to the interface your team uses every day. → *Python Django development*

[H3] **AI-Assisted Development** I use AI tools such as Claude and ChatGPT to research, build, and debug faster, and I review everything they produce before it ships.

Skills and technologies

[H2] **Tools I work with**

Area	Tools
Front end	HTML, CSS, JavaScript, Bootstrap, responsive design
Back end	Python, Django, PostgreSQL, SQL
SEO & analytics	Google Search Console, Google Analytics, keyword research, technical SEO audits
Workflow	Git, GitHub, Claude, ChatGPT
AI & data (trained)	Machine learning, deep learning, NLP, image processing, Pandas, NumPy

Featured projects

[H2] **Selected work**

[H3] **Floating City Limited — International real estate and hospitality website** I worked on the site's structure, responsive front-end design, and interactive sections for a UK-based maritime real estate and hospitality project. → *View project (Confirm you have permission to name this client before publishing. If not, use the title "International maritime real estate website".)*

[H3] **Seren Derma — Healthcare SEO** I coordinated keyword research, content, backlink work, and client approvals for a healthcare brand, and helped move several target keywords into top search positions. → *View project*

[H3] **Blackbox Learning — Education SEO** I lead the SEO and web team for an AI training academy, planning content around course searches and training interns to produce search-friendly work. → *View project*

[H3] **SEO Management Dashboard — Python & Django** A web application I'm building to bring SEO campaigns, team tasks, content approvals, and reporting into one place, replacing scattered spreadsheets. → *View project*

Why work with me

[H2] **Why clients work with me**

- **One person for code and search.** Your site is built to rank, without a handover between a developer and an SEO agency.
- **Responsive by default.** Every page is tested on phones, tablets, and desktops before launch.
- **Problem first, then code.** I start with what's slowing your business down and build only what solves it.
- **Faster delivery with AI tools.** I use AI to speed up research and development, and I check every line it writes.
- **Usability and performance.** Clear layouts, readable text, and fast load times, measured with Lighthouse.

Development process

[H2] **How a project works**

1. **Discovery** — We talk about your goals, audience, and the searches you want to be found for.
2. **Planning** — I map out the pages, content, and keywords, and agree a timeline with you.
3. **Design and development** — I build the site or app, sharing progress so you can give feedback early.
4. **Testing and optimization** — I check speed, mobile layout, accessibility, and on-page SEO before launch.
5. **Launch and support** — I set up Google Search Console and Analytics, launch, and stay available for fixes and updates.

Location and service area

[H2] **Based in Trivandrum, working across Kerala**

I'm based in Thiruvananthapuram and work with businesses across Kerala, from Trivandrum to Kochi and Kozhikode. I also work remotely with clients elsewhere in India and abroad, over video calls, email, and WhatsApp.

FAQ

[H2] **Frequently asked questions**

[H3] **How much does a website cost?** It depends on the number of pages, features, and content. Share what you need and I'll send a fixed quote with a breakdown before any work starts.

[H3] **How long does it take to build a website?** A small business site usually takes 2 to 4 weeks once content is ready. Larger sites and web applications take longer, and I'll give you a timeline during planning.

[H3] **Is SEO included with every website?** Every site I build includes on-page SEO basics: clean structure, page titles, meta descriptions, fast loading, and a sitemap. Ongoing SEO, such as content and link building, is a separate service.

[H3] **How long does SEO take to show results?** Usually a few months, depending on your competition and your site's current state. I'll explain what to expect after looking at your site, and I don't promise rankings in a fixed time.

[H3] **What technologies do you use?** HTML, CSS, and JavaScript for websites, and Python with Django and PostgreSQL for web applications. I recommend the simplest option that fits your needs.

[H3] **Can you work on my existing website?** Yes. I can fix technical SEO issues, improve speed and mobile layout, or redesign specific pages without rebuilding everything.

[H3] **Do you work with clients outside Kerala?** Yes. I work remotely with clients across India and abroad.

[H3] **Are you available for full-time roles?** Yes. I'm open to full-time roles in web development, Python and Django development, and SEO, as well as freelance projects.

Final call to action

[H2] **Have a project in mind?**

Tell me what you're building or what isn't working on your current site. I'll reply within 24 hours on working days with clear next steps.

- Button: **Start a Project** → /contact/
- Email: jibinjohnsoninfo@gmail.com
- WhatsApp: [your link]

9. Service page strategy

Launch three service pages: Website Development, SEO, and Python Django. Full-Stack is folded into the Django page, and AI-Assisted Development stays a homepage section until you have AI projects to show.

Website Development Services in Kerala — /services/web-development/

- **Intent:** a business owner who wants a new site or a redesign
- **H1:** Website Development Services in Kerala
- **Outline (H2s):** What you get · Types of websites I build (business sites, landing pages, portfolio sites) · SEO built into every build · My process · Example: AQ Air landing page · Pricing approach (quote-based, what affects cost) · FAQ · CTA
- **Unique content:** a checklist of what's included at launch (responsive layout, page titles, sitemap, Search Console setup, speed check)
- **CTA:** Get a website quote

SEO Services in Kerala — /services/seo/

- **Intent:** a business that isn't showing up on Google
- **H1:** SEO Services in Kerala
- **Outline (H2s):** Technical SEO · On-page SEO · Off-page SEO and link building · Local SEO for Trivandrum businesses · How I report progress · Healthcare and education SEO (Seren Derma, Blackbox Learning) · What SEO can and can't promise · FAQ · CTA
- **Unique content:** a sample monthly report layout and an honest section on timelines
- **CTA:** Request an SEO review of your site

Python Django Development — /services/python-django-development/

- **Intent:** a company needing a custom web app, dashboard, or internal tool; also recruiters searching for Django and full-stack developers
- **H1:** Python Django Developer in Kerala
- **Outline (H2s):** What I build (dashboards, admin panels, workflow tools) · Tech stack (Django, PostgreSQL, HTML/CSS/JS) · Case study: SEO Management Dashboard · How I work on custom builds · FAQ · CTA
- **Accuracy note:** describe this as small-to-medium custom applications. Don't claim enterprise systems or advanced AI integrations.
- **CTA:** Discuss your web app

Pages to add later

- **AI-Assisted Development:** only after you publish 1–2 real AI projects, such as a RAG chatbot. Until then, a page claiming AI services would be thin and hard to back up.
- **Separate Full-Stack page:** only if the Django page grows enough to need splitting.

10. SEO titles, meta descriptions, and URLs

Titles stay under 60 characters and descriptions under 160, so Google doesn't cut them off.

Page	URL	Title tag	Meta description
Home	/	Web Developer in Kerala & SEO Specialist | Jibin Johnson	Web developer and SEO specialist in Trivandrum, Kerala. I build fast, responsive websites ready for search, and custom Python Django apps.
Web Development	/services/web-development/	Website Development Services in Kerala | Jibin Johnson	Responsive, fast business websites built with SEO from day one. Freelance website development in Trivandrum and across Kerala. Get a quote.
SEO	/services/seo/	SEO Services in Kerala | Freelance SEO Specialist	Technical, on-page, and off-page SEO for Kerala businesses, with clear monthly reporting. Based in Trivandrum. Request an SEO review.
Python Django	/services/python-django-development/	Python Django Developer in Kerala | Jibin Johnson	Custom web apps, dashboards, and internal tools built with Python, Django, and PostgreSQL by a full-stack developer in Trivandrum.

Page	URL	Title tag	Meta description
About	/about/	About Jibin Johnson – Web Developer & SEO, Kerala	Web developer and SEO specialist at Prception Medialab, with a PG in Artificial Intelligence, working toward AI full-stack development.
Work	/work/	Projects & Case Studies | Jibin Johnson	Website, SEO, and Django projects: AQ Air, healthcare and education SEO campaigns, and an SEO Management Dashboard.
Case study	/work/seo-management-dashboard/ (one per project)	[Project name] – Case Study | Jibin Johnson	What the project needed, what I built, the tools I used, and the outcome.
Contact	/contact/	Contact Jibin Johnson – Web Developer in Trivandrum	Have a website, SEO, or Django project? Send a message or WhatsApp. I reply within 24 hours on working days.
Blog	/blog/	Web Development & SEO Insights | Jibin Johnson	Practical articles on building fast websites, technical SEO, Django, and using AI tools in development.

URL rules: lowercase, hyphens between words, a trailing slash, no dates in blog URLs, and no city names in URLs except where they are the page topic.

11. Internal linking strategy

The homepage passes visitors and ranking signals to the service pages, the service pages link to the case studies that prove them, and every page ends at Contact.

From	Links to	Anchor text
Home — services section	Each service page	"Website development services in Kerala", "SEO services in Kerala", "Python Django development"
Home — featured projects	Each case study	"View project" plus the project name
Web Development page	AQ Air case study, SEO page	"AQ Air landing page", "SEO services"
SEO page	Seren Derma and Blackbox case studies, Web Development page	"healthcare SEO project", "education SEO project", "website development"
Django page	SEO Dashboard case study	"SEO Management Dashboard"
Each case study	Its related service page, next case study, Contact	the service name, "Next project", "Start a project"
Blog posts	The most relevant service page, 1–2 times in the text	a natural, descriptive phrase
Every page	Home, Work, Services, About, Contact	navigation bar and footer

Breadcrumbs on service, case study, and blog pages, for example Home › Work › SEO Management Dashboard, with BreadcrumbList schema.

12. Technical SEO checklist

Your own site is the first thing a client checks for proof of your SEO skills, so get every item right before launch.

Indexing and crawling

- [ ] `robots.txt` that allows crawling and lists the sitemap URL
- [ ] `sitemap.xml` with every live page; no 404s or redirected URLs in it
- [ ] A canonical tag on every page pointing to itself, using https and a trailing slash
- [ ] One version of the domain (https://jibinjohnson.in/), with www and http redirecting to it
- [ ] Domain verified in Google Search Console, sitemap submitted, and Page indexing checked

- [ ] Google Analytics 4 installed

On-page

- [ ] One H1 per page, then H2 and H3 in order, with no skipped levels
- [ ] A unique title and meta description per page (section 10)
- [ ] Open Graph and Twitter tags, plus a 1200 × 630 share image
- [ ] Descriptive image filenames (e.g. `jibin-johnson-web-developer-kerala.webp`) and alt text that describes the image
- [ ] Breadcrumbs on inner pages

Performance and mobile

- [ ] Core Web Vitals in the "good" range: LCP under 2.5 s, INP under 200 ms, CLS under 0.1
- [ ] Images in WebP or AVIF, sized for their slot, with lazy loading below the fold
- [ ] Fonts preloaded or system fonts used; CSS and JS minified
- [ ] Tested at 360 px width with no horizontal scroll and tap targets at least 48 px
- [ ] Lighthouse 90+ for performance, accessibility, best practices, and SEO

Structured data (only properties the page actually shows)

Page	Schema type	Properties to include
Home	Person	name, jobTitle, url, image, email, worksFor (Prception Medialab), address (addressLocality: Thiruvananthapuram, addressRegion: Kerala, addressCountry: IN), sameAs (LinkedIn, GitHub), knowsAbout
Home	WebSite	name, url
About	ProfilePage	mainEntity pointing to the Person
Home and service pages with an FAQ	FAQPage	the questions and answers exactly as shown on the page
Service pages	Service	name, serviceType, provider (Person), areaServed (Kerala)
Inner pages	BreadcrumbList	the breadcrumb trail
Blog posts	Article / BlogPosting	headline, author, datePublished, image

Don't add a street address, ratings, reviews, or `aggregateRating`. You don't have published reviews, and invented schema can lead to a manual penalty. Check every page in Google's Rich Results Test before launch.

13. Recommended blog topics

Write from your own work. Each post should link to one service page and be something no generic competitor could write.

#	Title	Links to	Why it works
1	How I built an SEO Management Dashboard in Django to replace our spreadsheets	Django page	First-hand build story; shows full-stack skill
2	SEO for clinics in Kerala: what worked on a real healthcare campaign	SEO page	Matches the "healthcare SEO Kerala" long-tail; uses your Seren Derma experience
3	How I teach interns to code with AI tools without breaking things	About page	Unique angle from your mentoring role
4	Building a scroll-animated landing page in vanilla JavaScript (no framework)	Web Development page	A technical walkthrough of AQ Air
5	Technical SEO checklist for a new business website in Kerala	Web Development + SEO pages	Practical, links both services
6	How much does a website cost in Kerala? What changes the price	Web Development page	Answers a common buyer question honestly
7	SEO for training institutes: ranking course pages in a crowded market	SEO page	Uses your Blackbox Learning experience
8	What I learned in a year-long PG in Artificial Intelligence	About page	Personal, supports your AI direction

Start with posts 1, 2, and 4. They're the most original and back up your strongest projects. One well-written post a month is enough.

14. Final recommendations

Launch small and accurate, then grow the site with proof. A clean five-page site with real case studies will beat competitors' long, keyword-stuffed pages over time.

1. **Launch with Home, About, Work, three service pages, and Contact.** Add the blog once the first two posts are written.
2. **Write one full case study before launch.** Make it the SEO Management Dashboard, which you fully control.
3. **Get client permission** before naming Floating City, Seren Derma, or Blackbox Learning or showing their screenshots.
4. **Collect real numbers.** Export keyword positions from Google Search Console for the campaigns you worked on. One honest figure beats every "No.1" on competitors' sites.
5. **Set up a Google Business Profile** only if you meet Google's rules for a service-area business. It drives local Trivandrum results, but don't show a home address publicly.
6. **Keep names consistent.** Use the same name, title, email, and city on the site, LinkedIn, GitHub, and your resume, since Google connects them.
7. **Ask for 2–3 LinkedIn recommendations,** then quote them on the site with permission.
8. **Review monthly in Search Console:** which queries bring impressions, which pages get clicks, and any indexing errors.
9. **Add the AI-Assisted Development page** only after publishing a real AI project.
